Exclusively Periodontics & Dental Implants

State-of-the-art technology now available --- "PRP"

I am pleased to announce the availability of PRP (platelet rich plasma) for use in hard and soft tissue surgical procedures in our office. PRP is derived from the patient's own blood and is collected here in our office. It concentrates the seven growth factors present in the platelets to about five times their normal level.

Any surgery results in some tissue and cellular damage. PRP accelerates healing and repair naturally as it increases revascularization of soft tissue and bone. I have been using PRP for over a year on multiple and varied surgical procedures to accelerate healing, help minimize post operative discomfort, and enhance long term results. We routinely perform epithelial, sub-epithelial, and accelular dermal matrix (Alloderm) soft tissue graft procedures using PRP, with clinically discernable enhancement of these results.

How PRP Can Benefit Your Patients:

- Accelerate soft tissue healing*
- Enhance wound closure and sealing*
- Reduce bleeding, bruising, inflammation and swelling*
- Stabilize both bone and soft tissue grafts*
- Accelerate bone growth and regeneration*
- Accelerate osseointegration of implants*
- Reduce overall healing time*
- Promote greater patient comfort, less need for narcotics*

I welcome any questions you may have regarding this exciting addition to our practice. I look forward to the privilege of affording your patients this cutting edge technology.

Warmest regards,

Patrick V. Nicosia D.D.S., M.S.
